

CRAFT MODIFICATION KIT (CMK)

The Craft Modification Kit (CMK) used on the Zodiac 470 family of soft and hard floor inflatable boats, provides enhanced performance, durability and utility. The CMK includes a **Transom Cap** with features and a pair of **Solid Aluminum Stringers**.

The **Transom Cap** is made of Corrosion Resistant Stainless Steel (CRSS). Two layers of *powder coating* are applied to the Cap for the ultimate in toughness and resistance to harsh environmental extremes. The Cap utilizes a *texture surface* coating for positive grip when wet. The attachment of the Cap to the transom is complete with all *Stainless Steel Hardware* forming a rigid structure to the craft.

The CMK utilizes a pair of 7 foot **Solid Aluminum Stringers**. When the stringers are used with the hard floor, the boat hull takes on a rigid fixed shape. By reducing flex in the hull, the live payload capacity of the craft is extended.

Positioning of the Johnson **Enforcer** motor on the **Cap** is simplified through the use of the *Motor Position Guides*. They provide positive placement of the **Enforcer** motor in the center of the Transom.

The **Cap** is fitted with two large, easy to use, utility *Eyebolts*. They are particularly handy for use as tie down points, towing bridal hook up or as aft lifting points for the craft.

The *Motor Positioning Pins* are secured to the **Cap** and assist in the rapid lock-in of the Johnson **Enforcer** 55HP motor to the transom, through the use of matched pre-drilled alignment holes.

The Transom Cap installation may be completed by the user or at the contractor's facility prior to user receipt of the craft.
